PT Identifying, isolating and regulating senescence-related genes - useful
PT to ameliorate problems associated with accumulation of senescent cells,
PT e.g. age-related lipofuscin accumulation in the retina and AIDS.
XX
PS Claim 8; Page 38; 135pp; English.
XX
CC AAT28076-T28113, and AAT28131-T28173 represent novel senescent-related
CC gene sequences isolated from fibroblasts using the method of the
CC invention. In the method of the invention, mRNA is isolated from a
CC senescent cell, and a young quiescent cell, and the mRNAs are amplified
CC (using primers such as those shown in AAT28044-T28075) in separate
CC reaction mixtures. The amplified sequences are then separated by size or
CC charge, and the products are analysed to identify a gene from young
CC quiescent cells and dividing cells, that is present at a different level
CC from senescent cells. To enhance the method even more, it can be
CC performed in conjuncture with an enhanced differential display (EDD)
CC method (an mRNA preparation method) on the fibroblasts. The method can be
CC used for the rapid and efficient identification and isolation of
CC senescence-related genes and gene products, and to detect and distinguish
CC between senescent and non-senescent cells. It can also be used to destroy
CC cells expressing senescence specific (or related) gene products, and to
CC screen for compounds capable of altering gene expression in senescent
CC cells. The method can also be used to ameliorate problems associated with
CC the accumulation of senescent cells such as age-related lipofuscin
CC accumulation in the retina, and in the treatment of AIDS. Also, the
CC method can be used to distinguish young cells from senescent cells in
CC donor tissue, which is useful in removing senescent melanocytes
CC overexpressing melanin which cause hypopigmentation, or liver spots

CC The present invention describes isolated human NOVX proteins, where X is
CC 1 to 42. ACC62236 to ACC62345 encode the human NOVX proteins given in
CC ABR54167 to ABR54276. NOVX sequences have antiatherosclerotic, cardiant,
CC hypotensive, dermatological, anorectic, immunosuppressive, cytostatic,
CC antidiabetic, antiinfertility, haemostatic, antiinflammatory, anti-HIV,
CC antiasthmatic, metabolic, immunomodulator, neuroprotective, nootropic,
CC antiparkinsonian and antilipaemic activities, and can be used in gene
CC therapy. NOVX proteins are useful for treating or preventing a pathology
CC associated with a NOVX protein in humans and for treating a syndrome
CC associated with the human disease. NOVX nucleic acids, proteins and
CC antibodies can be used in the treatment and diagnosis of cardiomyopathy,
CC atherosclerosis, hypertension, congenital heart defects, aortic stenosis,
CC valve disease, tuberous sclerosis, scleroderma, obesity, transplantation,
CC congenital adrenal hyperplasia, prostate cancer, diabetes, metabolic
CC disorders, neoplasm, lymphoma, uterus cancer, fertility, haemophilia,
CC hypercoagulation, idiopathic thrombocytopenic purpura, graft versus host
CC disease, AIDS, bronchial asthma, Crohn's disease, multiple sclerosis,
CC infectious disease, anorexia, cancer-associated cachexia, cancer,
CC Alzheimer's disease, Parkinson's disease, immune disorders,
CC haematopoietic disorders, dyslipidaemias, and metabolic syndrome X.
CC ACC62346 to ACC62465 represent PCR primers and probes for human NOVX
CC sequences, which are used in examples from the present invention.
CC ABR54277 represents a human trypsinogen protein given in comparison with
CC the human NOV35b protein in the exemplification of the present invention

PS Claim 1; Page 333; 455pp; English.
XX
CC The present invention describes a method (M1) for determining a
CC toxicological response to an agent, which comprises comparing the
CC expression profile of one or more human toxic response genes to a
CC reference gene expression profile indicative of toxicity, and so
CC determining the presence of a toxic response to the agent. Also
CC described: (1) an array comprising one or more polynucleotides selected
CC from the genes corresponding to the partial sequences given in ABZ82842
CC to ABZ84764, or their fragments of at least 20 nucleotides, or homologues
CC ; and (2) determining if a gene putatively identified to be a toxic
CC response gene plays a role on toxic response pathways by determining the
CC expression profile of the gene after exposure of cells or a human subject
CC to a known toxic pharmaceutical or industrial agent, comprising: (a)
CC exposing cells to an agent or isolating cells from a human subject who
CC was exposed to an agent; (b) obtaining the test gene expression profile
CC for a putatively identified toxic response gene after exposure to a known
CC toxic pharmaceutical or industrial agent; and (c) comparing the test
CC profile to the expression profile of a gene with a similar function or
CC comparing the test profile to the expression profile of that gene after
CC exposure to other known toxic compounds. The methods are useful for
CC predicting and determining toxicological responses on a cellular, organ
CC or system level. The arrays comprising the human genes are useful for
CC toxicological screening of drugs, pharmaceutical compounds and chemicals

PT   Determining degree of unsaturated fatty acid in beef body fat or milk
PT   fat, useful for determining whether Bos taurus is capable of providing
PT   diary products having good taste and texture, based on stearoyl-CoA
PT   desaturase (SCD) genotype.
XX
PS   Disclosure; SEQ ID NO 10; 39pp; Japanese.
XX
CC   The invention relates to a novel method for determining the degree of an
CC   unsaturated fatty acid in beef body fat or milk fat, based on the
CC   stearoyl-CoA desaturase (SCD) genotype. The method involves detecting
CC   single nucleotide polymorphisms (SNPs) of the SCD gene, provided in the
CC   specification, which relate to the degree of unsaturation in beef body
CC   fat. The determination involves amplifying a template gene region
CC   prepared from genomic DNA or cDNA obtained from Bos taurus; digesting the
CC   obtained amplified fragment using a restriction enzyme; and determining
CC   the genotype of SCD based on the presence or absence of the digestion.
CC   The method is useful for determining whether a B. taurus is capable of
CC   providing diary products having good taste and texture, which involves
CC   determining the capability based on the results of the method. The method
CC   is useful for determining the quality of meat or milk obtained from B.
CC   taurus, e.g. Japanese black cattle. The method is useful in fields such
CC   as dairy industries for obtaining quality butter and other dairy products
CC   having e.g. good taste, texture. The method is useful for identifying a
CC   B. taurus capable of producing milk having high content of unsaturated
CC   fatty acids (with low melting point) or capable of providing meat with
CC   good taste and texture. The identified B. taurus can be employed in
CC   breeding programmes for obtaining hybrid varieties. This polynucleotide
CC   sequence represents a primer used in the exemplification of the
CC   invention.

CC   The method is useful for determining whether a B. taurus is capable of
CC   providing diary products having good taste and texture, which involves
CC   determining the capability based on the results of the method. The method
CC   is useful for determining the quality of meat or milk obtained from B.
CC   taurus, e.g. Japanese black cattle. The method is useful in fields such
CC   as dairy industries for obtaining quality butter and other dairy products
CC   having e.g. good taste, texture. The method is useful for identifying a
CC   B. taurus capable of producing milk having high content of unsaturated
CC   fatty acids (with low melting point) or capable of providing meat with
CC   good taste and texture. The identified B. taurus can be employed in
CC   breeding programmes for obtaining hybrid varieties. This polynucleotide
CC   sequence represents a primer used in the exemplification of the
CC   invention.

PT   Determining a toxicological response to an agent, useful for screening of
PT   drugs, comprises comparing the expression profile of one or more human
PT   toxic response genes to a reference gene expression profile indicative of
PT   toxicity.
XX
PS   Claim 1; Page 343; 455pp; English.
XX
CC   The present invention describes a method (M1) for determining a
CC   toxicological response to an agent, which comprises comparing the
CC   expression profile of one or more human toxic response genes to a
CC   reference gene expression profile indicative of toxicity, and so
CC   determining the presence of a toxic response to the agent. Also
CC   described: (1) an array comprising one or more polynucleotides selected
CC   from the genes corresponding to the partial sequences given in ABZ82842
CC   to ABZ84764, or their fragments of at least 20 nucleotides, or homologues
CC   ; and (2) determining if a gene putatively identified to be a toxic
CC   response gene plays a role on toxic response pathways by determining the
CC   expression profile of the gene after exposure of cells or a human subject
CC   to a known toxic pharmaceutical or industrial agent, comprising: (a)
CC   exposing cells to an agent or isolating cells from a human subject who
CC   was exposed to an agent; (b) obtaining the test gene expression profile
CC   for a putatively identified toxic response gene after exposure to a known
CC   toxic pharmaceutical or industrial agent; and (c) comparing the test
CC   profile to the expression profile of a gene with a similar function or
CC   comparing the test profile to the expression profile of that gene after
CC   exposure to other known toxic compounds. The methods are useful for
CC   predicting and determining toxicological responses on a cellular, organ
CC   or system level. The arrays comprising the human genes are useful for
CC   toxicological screening of drugs, pharmaceutical compounds and chemicals

PT   Treating, inhibiting or ameliorating liver steatosis in a subject
PT   comprises administering to the subject an agent capable of activating a
PT   ciliary neurotrophic factor receptor.
XX
PS   Example 1; SEQ ID NO 3; 9pp; English.
XX
CC   The invention relates to a method of treating or improving liver
CC   steatosis in a subject comprising administering to the subject an agent
CC   capable of activating a ciliary neurotrophic factor (CNTF) receptor. The
CC   agent is CNTF or a modified CNTF. The modified CNTF is Axokine. The
CC   treatment results in improved liver function as determined by ALT/AST
CC   ratio, reduced stearoyl-CoA desaturase-1 (SCD-1) gene expression or
CC   activity, enhanced biochemical responsiveness of the liver to insulin
CC   and/or reduced synthesis of complex lipids. The liver steatosis results
CC   from alcohol consumption, obesity and/or exposure to a hepatotoxin. The
CC   method is useful for treating, inhibiting and/or ameliorating liver
CC   steatosis in a subject. This sequence represents a Real Time PCR primer
CC   used in the method of the invention.

CC The present invention describes novel human proteins designated NOVX,
CC where X is 1 to 20 e.g. NOV1. NOVX sequences can have neuroprotective,
CC cytostatic, anticonvulsant, cerebroprotective, nootropic, cardiovascular,
CC antidiabetic, antiinflammatory, antirheumatic, antiarthritic, virucide,
CC immunosuppressive, antiallergic, antianaemic, antibacterial, fungicide,
CC protozoacide and antihelminthic activities, and can be used in gene
CC therapy. The NOVX proteins, nucleotides or antibodies can be used in the
CC manufacture of a medicament for treating a syndrome associated with a
CC human disease selected from NOVX-associated disorder, such as cancers
CC (e.g. leukaemia, lymphoma, melanoma or cancer of the liver, lung, muscle,
CC ovary, testis and uterus), neurological disorders (e.g. epilepsy, stroke,
CC ischaemic cerebrovascular disease, Alzheimer's disease or Pick's
CC disease), disorders of vesicular transport (e.g. cystic fibrosis,
CC diabetes mellitus, Grave's disease, or goitre), gastrointestinal
CC disorders (e.g. ulcerative colitis, or gastric and duodenal disorders),
CC autoimmune diseases (e.g. allergic reactions, autoimmune haemolytic
CC anaemia, or rheumatoid arthritis), viral, bacterial, fungal, helminthic
CC and protozoal infections. The NOVX proteins can be used as immunogens to
CC produce antibodies and as vaccines. The NOVX nucleotide sequences may be
CC used in chromosome mapping, identifying individuals from minute
CC biological samples (tissue typing), and in forensic identification of a
CC biological sample. The present sequence represents a probe for a human
CC NOVX protein, which is used in an example from the present invention

PS   Example 6; SEQ ID NO 15; 44pp; English.
XX
CC   This invention relates to a novel method of identifying candidate p53
CC   pathway modulating agent which comprises contacting an assay system
CC   comprising stearyl coenzyme A desaturase (SCD) polypeptide or nucleic
CC   acid, or their functionally active fragment or derivative, with a test
CC   agent under conditions where, but for the presence of the test agent, the
CC   system provides a reference activity. The p53 gene is mutated in over 50
CC   different types of human cancers and is believed to be the most commonly
CC   mutated gene in human cancer. The human p53 protein normally functions as
CC   a central integrator of signals including DNA damage, hypoxia, nucleotide
CC   deprivation and oncogene activation. Modulators of p53 may have
CC   cytostatic activity or be useful in gene therapy. The methods of the
CC   invention are useful for identifying modulators of the p53 pathway as
CC   therapeutic targets for disorders associated with defective p53 function,
CC   such as angiogenic, apoptotic or cell proliferative disorders, for
CC   example cancer. The modulators are useful as research reagents,
CC   diagnostics and therapeutics. The present sequence (SCD3) is that of a
CC   region of a human Stearoyl-CoA desaturase sequence (see ADC72205) which
CC   was selected for small interfering RNA (siRNA) generation in the
CC   exemplification of the invention.

PT   New short interfering nucleic acid, useful e.g. for treatment and
PT   diagnosis of obesity or diabetes, downregulates expression of the
PT   stearoyl-CoA desaturase gene.
XX
PS   Example 3; SEQ ID NO 582; 139pp; English.
XX
CC   The present invention describes a short interfering nucleic acid (siNA)
CC   that downregulates expression of the SCD (stearoyl-CoA desaturase) gene
CC   by RNA interference. Also described: (1) modulating expression of SCD
CC   genes in cells, tissue explants or organisms by introduction of siNA; (2)
CC   kits for in vitro or in vivo delivery of siNA; (3) conjugates and/or
CC   complexes of siNA; and (4) vectors that express siNA. SCD inhibiting
CC   siNAs have anorectic, antidiabetic, antiarteriosclerotic, cytostatic and
CC   virucide activities. The siNAs can be used to modulate expression of SCD
CC   genes, in cells, tissue explants or organisms, e.g. for treating obesity;
CC   diabetes (types I and II); atherosclerosis; cancer and viral infections.
CC   They can also be used for drug screening; diagnosis; target
CC   identification and validation; genetic engineering; pharmacogenomics;
CC   studying gene function and gene mapping (e.g. of single-nucleotide
CC   polymorphisms). The present sequence represents an SCD siNA, which is
CC   used in the exemplification of the present invention.

PT New double-stranded short interfering nucleic acid molecule, useful for
PT down-regulating the expression of an endogenous mammalian target gene or
PT for treating diseases that respond to modulation of gene expression or
PT activity.
XX
PS Example 24; SEQ ID NO 166; 593pp; English.
XX
CC The invention relates to a double-stranded short interfering nucleic acid
CC (siNA) molecule that down-regulates expression of an endogenous mammalian
CC target gene comprising one or more chemical modifications and each strand
CC of the double-stranded siNA comprises about 21 nucleotides. The siNA of
CC the invention demonstrates antiarteriosclerotic, neuroprotective,
CC nootropic, antiparkinsonian and anticonvulsant activities and may be
CC useful for down-regulating the expression of an endogenous mammalian
CC target gene and therefore in the treatment of any disease or condition
CC that responds to modulation of gene expression or activity in a cell,
CC tissue or organism. The disease or condition may include pulmonary
CC diseases such as restenosis, atherosclerosis, Alzheimer's disease,
CC Parkinson's disease, epilepsy, dementia, huntington's disease or
CC amyotrophic lateral sclerosis. Furthermore, the siNA may be utilised for
CC gene therapy applications. The current sequence is that of the siNA
CC target DNA of the invention.

PT   New double-stranded short interfering nucleic acid molecule, useful for
PT   down-regulating the expression of an endogenous mammalian target gene or
PT   for treating diseases that respond to modulation of gene expression or
PT   activity.
XX
PS   Example 24; SEQ ID NO 167; 593pp; English.
XX
CC   The invention relates to a double-stranded short interfering nucleic acid
CC   (siNA) molecule that down-regulates expression of an endogenous mammalian
CC   target gene comprising one or more chemical modifications and each strand
CC   of the double-stranded siNA comprises about 21 nucleotides. The siNA of
CC   the invention demonstrates antiarteriosclerotic, neuroprotective,
CC   nootropic, antiparkinsonian and anticonvulsant activities and may be
CC   useful for down-regulating the expression of an endogenous mammalian
CC   target gene and therefore in the treatment of any disease or condition
CC   that responds to modulation of gene expression or activity in a cell,
CC   tissue or organism. The disease or condition may include pulmonary
CC   diseases such as restenosis, atherosclerosis, Alzheimer's disease,
CC   Parkinson's disease, epilepsy, dementia, huntington's disease or
CC   amyotrophic lateral sclerosis. Furthermore, the siNA may be utilised for
CC   gene therapy applications. The current sequence is that of the siNA
CC   target DNA of the invention.

PT   Novel human proteins and nucleic acid encoding the proteins, useful for
PT   diagnosis, treatment and prevention of disorders involving the human
PT   protein or nucleic acid e.g. cardiac and neurological disorders.
XX
PS   Example C; Page 289; 460pp; English.
XX
CC   The present invention describes isolated human NOVX proteins, where X is
CC   1 to 42. ACC62236 to ACC62345 encode the human NOVX proteins given in
CC   ABR54167 to ABR54276. NOVX sequences have antiatherosclerotic, cardiant,
CC   hypotensive, dermatological, anorectic, immunosuppressive, cytostatic,
CC   antidiabetic, antiinfertility, haemostatic, antiinflammatory, anti-HIV,
CC   antiasthmatic, metabolic, immunomodulator, neuroprotective, nootropic,
CC   antiparkinsonian and antilipaemic activities, and can be used in gene
CC   therapy. NOVX proteins are useful for treating or preventing a pathology
CC   associated with a NOVX protein in humans and for treating a syndrome
CC   associated with the human disease. NOVX nucleic acids, proteins and
CC   antibodies can be used in the treatment and diagnosis of cardiomyopathy,
CC   atherosclerosis, hypertension, congenital heart defects, aortic stenosis,
CC   valve disease, tuberous sclerosis, scleroderma, obesity, transplantation,
CC   congenital adrenal hyperplasia, prostate cancer, diabetes, metabolic
CC   disorders, neoplasm, lymphoma, uterus cancer, fertility, haemophilia,
CC   hypercoagulation, idiopathic thrombocytopenic purpura, graft versus host
CC   disease, AIDS, bronchial asthma, Crohn's disease, multiple sclerosis,
CC   infectious disease, anorexia, cancer-associated cachexia, cancer,
CC   Alzheimer's disease, Parkinson's disease, immune disorders,
CC   haematopoietic disorders, dyslipidaemias, and metabolic syndrome X.
CC   ACC62346 to ACC62465 represent PCR primers and probes for human NOVX
CC   sequences, which are used in examples from the present invention.
CC   ABR54277 represents a human trypsinogen protein given in comparison with
CC   the human NOV35b protein in the exemplification of the present invention

PS   Example 3; SEQ ID NO 604; 139pp; English.
XX
CC   The present invention describes a short interfering nucleic acid (siNA)
CC   that downregulates expression of the SCD (stearoyl-CoA desaturase) gene
CC   by RNA interference. Also described: (1) modulating expression of SCD
CC   genes in cells, tissue explants or organisms by introduction of siNA; (2)
CC   kits for in vitro or in vivo delivery of siNA; (3) conjugates and/or
CC   complexes of siNA; and (4) vectors that express siNA. SCD inhibiting
CC   siNAs have anorectic, antidiabetic, antiarteriosclerotic, cytostatic and
CC   virucide activities. The siNAs can be used to modulate expression of SCD
CC   genes, in cells, tissue explants or organisms, e.g. for treating obesity;
CC   diabetes (types I and II); atherosclerosis; cancer and viral infections.
CC   They can also be used for drug screening; diagnosis; target
CC   identification and validation; genetic engineering; pharmacogenomics;
CC   studying gene function and gene mapping (e.g. of single-nucleotide
CC   polymorphisms). The present sequence represents an SCD siNA, which is
CC   used in the exemplification of the present invention.

PT angina, ischemia, myocardial infarction or arteriosclerosis by detection
PT of a polynucleotide in a biological sample comprises detecting a
PT hybridization complex.
XX
PS Example 3; Page 105; 454pp; English.
XX
CC The invention describes a method of predicting, diagnosing or prognosing
CC a cardiovascular disease by detection of a polynucleotide in a biological
CC sample comprises hybridising at least one of the polynucleotide to a
CC nucleic acid material of a biological sample, thus forming a
CC hybridisation complex, and detecting the hybridisation complex. The
CC polynucleotides, polypeptides, antisense molecule, antibody and reagent
CC are useful for preparing compositions for preventing, predicting or
CC diagnosing, or a medicament for treating a cardiovascular disease, e.g.
CC arteriosclerosis, ischaemia, angina pectoris, or myocardial infarction.
CC This sequence represents a primer used to identify genes differentially
CC regulated in individuals with cardiovascular disease

XX
CC The present invention describes a short interfering nucleic acid (siNA)
CC that downregulates expression of the SCD (stearoyl-CoA desaturase) gene
CC by RNA interference. Also described: (1) modulating expression of SCD
CC genes in cells, tissue explants or organisms by introduction of siNA; (2)
CC kits for in vitro or in vivo delivery of siNA; (3) conjugates and/or
CC complexes of siNA; and (4) vectors that express siNA. SCD inhibiting
CC siNAs have anorectic, antidiabetic, antiarteriosclerotic, cytostatic and
CC virucide activities. The siNAs can be used to modulate expression of SCD
CC genes, in cells, tissue explants or organisms, e.g. for treating obesity;
CC diabetes (types I and II); atherosclerosis; cancer and viral infections.
CC They can also be used for drug screening; diagnosis; target
CC identification and validation; genetic engineering; pharmacogenomics;
CC studying gene function and gene mapping (e.g. of single-nucleotide
CC polymorphisms). The present sequence represents an SCD siNA, which is
CC used in the exemplification of the present invention.

XX
CC   The invention relates to a double-stranded short interfering nucleic acid
CC   (siNA) molecule that down-regulates expression of an endogenous mammalian
CC   target gene comprising one or more chemical modifications and each strand
CC   of the double-stranded siNA comprises about 21 nucleotides. The siNA of
CC   the invention demonstrates antiarteriosclerotic, neuroprotective,
CC   nootropic, antiparkinsonian and anticonvulsant activities and may be
CC   useful for down-regulating the expression of an endogenous mammalian
CC   target gene and therefore in the treatment of any disease or condition
CC   that responds to modulation of gene expression or activity in a cell,
CC   tissue or organism. The disease or condition may include pulmonary
CC   diseases such as restenosis, atherosclerosis, Alzheimer's disease,
CC   Parkinson's disease, epilepsy, dementia, huntington's disease or
CC   amyotrophic lateral sclerosis. Furthermore, the siNA may be utilised for
CC   gene therapy applications. The current sequence is that of the siNA DNA-
CC   RNA hybrid of the invention.

XX
CC   The present invention describes a short interfering nucleic acid (siNA)
CC   that downregulates expression of the SCD (stearoyl-CoA desaturase) gene
CC   by RNA interference. Also described: (1) modulating expression of SCD
CC   genes in cells, tissue explants or organisms by introduction of siNA; (2)
CC   kits for in vitro or in vivo delivery of siNA; (3) conjugates and/or
CC   complexes of siNA; and (4) vectors that express siNA. SCD inhibiting
CC   siNAs have anorectic, antidiabetic, antiarteriosclerotic, cytostatic and
```

CC virucide activities. The siNAs can be used to modulate expression of SCD
CC genes, in cells, tissue explants or organisms, e.g. for treating obesity;
CC diabetes (types I and II); atherosclerosis; cancer and viral infections.
CC They can also be used for drug screening; diagnosis; target
CC identification and validation; genetic engineering; pharmacogenomics;
CC studying gene function and gene mapping (e.g. of single-nucleotide
CC polymorphisms). The present sequence represents an SCD siNA, which is
CC used in the exemplification of the present invention.

PT New antisense oligonucleotides targeted to nucleic acid encoding Protein
PT Phosphatase 2 catalytic subunit beta, useful for treating diseases
PT related to Protein Phosphatase 2 catalytic subunit beta expression, such
PT as cancer.
XX
PS Example 16; Page 98; 137pp; English.
XX
CC The invention relates to a novel compound 8-50 nucleotides in length
CC targeted to a nucleic acid molecule encoding a protein phosphatase 2
CC catalytic beta subunit, where the compound specifically hybridises with
CC and inhibits the expression of protein phosphatase 2 catalytic beta
CC subunits, or specifically hybridises with at least an 8-nucleotide
CC portion of an active site on a nucleic acid molecule encoding a protein
CC phosphatase 2 catalytic beta subunit. The antisense compounds are useful
CC for modulating the expression of protein phosphatase 2 catalytic beta
CC subunits and for treating diseases or conditions associated with
CC expression of protein phosphatase 2 catalytic beta subunits, e.g.
CC aberrant insulin regulation or diabetes or a hyperproliferative disorder,
CC particularly cancer. The antisense compounds are also useful for
CC diagnostics, therapeutics, prophylaxis, e.g. to prevent or delay
CC infection, inflammation or tumour formation, as research reagents and
CC kits, and in distinguishing between functions of various members of a
CC biological pathway. This polynucleotide sequence represents an
CC oligonucleotide inhibitor of rat protein phosphatase 2 catalytic beta
CC subunit mRNA levels of the invention. NOTE: This oligonucleotide contains
CC phosphorothioate residues and has 2'- MOE wings with a deoxy gap

PS Claim 3; Page 94; 117pp; English.
XX
CC The present invention describes a compound (I) that is 8-50 nucleobases
CC in length targeted to a nucleic acid molecule encoding human stearoyl-CoA
CC desaturase, and which specifically hybridises with and inhibits the
CC expression of human stearoyl-CoA desaturase, or which specifically
CC hybridises with at least an 8-nucleobase portion of an active site on a
CC nucleic acid molecule encoding human stearoyl-CoA desaturase. Human
CC stearoyl-CoA desaturase is mapped to chromosome 10. (I) has antilipaemic,
CC cardiovascular, antiarteriosclerotic, cytostatic and antiinflammatory
CC activities, and can be used in antisense therapy. The antisense compounds
CC (I) can be used for modulating the expression of human stearoyl-CoA
CC desaturase and for treating diseases or conditions associated with
CC expression of human stearoyl-CoA desaturase, e.g. abnormal lipid or
CC cholesterol metabolism, atherosclerosis, or cardiovascular diseases. The
CC antisense compounds (I) can also be used for diagnostics, therapeutics
CC and prophylaxis, e.g. to prevent or delay infection, inflammation or
CC tumour formation, as research reagents and kits, and in distinguishing
CC between functions of various members of a biological pathway. The present
CC sequence represents a human stearoyl-CoA desaturase inhibiting chimeric
CC phosphorothioate antisense oligonucleotide, which is given in an example
CC from the present invention

PT   New antisense oligonucleotides targeted to nucleic acids encoding human
PT   stearoyl-CoA desaturase, useful for treating diseases associated with the
PT   desaturase, e.g. atherosclerosis, and in diagnostic and research
PT   applications.
XX
PS   Claim 3; Page 95; 117pp; English.
XX
CC   The present invention describes a compound (I) that is 8-50 nucleobases
CC   in length targeted to a nucleic acid molecule encoding human stearoyl-CoA
CC   desaturase, and which specifically hybridises with and inhibits the
CC   expression of human stearoyl-CoA desaturase, or which specifically
CC   hybridises with at least an 8-nucleobase portion of an active site on a
CC   nucleic acid molecule encoding human stearoyl-CoA desaturase. Human
CC   stearoyl-CoA desaturase is mapped to chromosome 10. (I) has antilipaemic,
CC   cardiovascular, antiarteriosclerotic, cytostatic and antiinflammatory
CC   activities, and can be used in antisense therapy. The antisense compounds
CC   (I) can be used for modulating the expression of human stearoyl-CoA
CC   desaturase and for treating diseases or conditions associated with
CC   expression of human stearoyl-CoA desaturase, e.g. abnormal lipid or
CC   cholesterol metabolism, atherosclerosis, or cardiovascular diseases. The
CC   antisense compounds (I) can also be used for diagnostics, therapeutics
CC   and prophylaxis, e.g. to prevent or delay infection, inflammation or
CC   tumour formation, as research reagents and kits, and in distinguishing
CC   between functions of various members of a biological pathway. The present
CC   sequence represents a human stearoyl-CoA desaturase inhibiting chimeric
CC   phosphorothioate antisense oligonucleotide, which is given in an example
CC   from the present invention

CC   in length targeted to a nucleic acid molecule encoding human stearoyl-CoA
CC   desaturase, and which specifically hybridises with and inhibits the
CC   expression of human stearoyl-CoA desaturase, or which specifically
CC   hybridises with at least an 8-nucleobase portion of an active site on a
CC   nucleic acid molecule encoding human stearoyl-CoA desaturase. Human
CC   stearoyl-CoA desaturase is mapped to chromosome 10. (I) has antilipaemic,
CC   cardiovascular, antiarteriosclerotic, cytostatic and antiinflammatory
CC   activities, and can be used in antisense therapy. The antisense compounds
CC   (I) can be used for modulating the expression of human stearoyl-CoA
CC   desaturase and for treating diseases or conditions associated with
CC   expression of human stearoyl-CoA desaturase, e.g. abnormal lipid or
CC   cholesterol metabolism, atherosclerosis, or cardiovascular diseases. The
CC   antisense compounds (I) can also be used for diagnostics, therapeutics
CC   and prophylaxis, e.g. to prevent or delay infection, inflammation or
CC   tumour formation, as research reagents and kits, and in distinguishing
CC   between functions of various members of a biological pathway. The present
CC   sequence represents a human stearoyl-CoA desaturase inhibiting chimeric
CC   phosphorothioate antisense oligonucleotide, which is given in an example
CC   from the present invention

PT   New antisense oligonucleotides targeted to nucleic acids encoding human
PT   stearoyl-CoA desaturase, useful for treating diseases associated with the
PT   desaturase, e.g. atherosclerosis, and in diagnostic and research
PT   applications.
XX
PS   Claim 3; Page 95; 117pp; English.
XX
CC   The present invention describes a compound (I) that is 8-50 nucleobases
CC   in length targeted to a nucleic acid molecule encoding human stearoyl-CoA
CC   desaturase, and which specifically hybridises with and inhibits the
CC   expression of human stearoyl-CoA desaturase, or which specifically
CC   hybridises with at least an 8-nucleobase portion of an active site on a
CC   nucleic acid molecule encoding human stearoyl-CoA desaturase. Human
CC   stearoyl-CoA desaturase is mapped to chromosome 10. (I) has antilipaemic,
CC   cardiovascular, antiarteriosclerotic, cytostatic and antiinflammatory
CC   activities, and can be used in antisense therapy. The antisense compounds
CC   (I) can be used for modulating the expression of human stearoyl-CoA
CC   desaturase and for treating diseases or conditions associated with
CC   expression of human stearoyl-CoA desaturase, e.g. abnormal lipid or
CC   cholesterol metabolism, atherosclerosis, or cardiovascular diseases. The
CC   antisense compounds (I) can also be used for diagnostics, therapeutics
CC   and prophylaxis, e.g. to prevent or delay infection, inflammation or
CC   tumour formation, as research reagents and kits, and in distinguishing
CC   between functions of various members of a biological pathway. The present
CC   sequence represents a human stearoyl-CoA desaturase inhibiting chimeric
CC   phosphorothioate antisense oligonucleotide, which is given in an example
CC   from the present invention

CC   (I) can be used for modulating the expression of human stearoyl-CoA
CC   desaturase and for treating diseases or conditions associated with
CC   expression of human stearoyl-CoA desaturase, e.g. abnormal lipid or
CC   cholesterol metabolism, atherosclerosis, or cardiovascular diseases. The
CC   antisense compounds (I) can also be used for diagnostics, therapeutics
CC   and prophylaxis, e.g. to prevent or delay infection, inflammation or
CC   tumour formation, as research reagents and kits, and in distinguishing
CC   between functions of various members of a biological pathway. The present
CC   sequence represents a human stearoyl-CoA desaturase inhibiting chimeric
CC   phosphorothioate antisense oligonucleotide, which is given in an example
CC   from the present invention

PT   New antisense oligonucleotides targeted to nucleic acids encoding human
PT   stearoyl-CoA desaturase, useful for treating diseases associated with the
PT   desaturase, e.g. atherosclerosis, and in diagnostic and research
PT   applications.
XX
PS   Claim 3; Page 94; 117pp; English.
XX
CC   The present invention describes a compound (I) that is 8-50 nucleobases
CC   in length targeted to a nucleic acid molecule encoding human stearoyl-CoA
CC   desaturase, and which specifically hybridises with and inhibits the
CC   expression of human stearoyl-CoA desaturase, or which specifically
CC   hybridises with at least an 8-nucleobase portion of an active site on a
CC   nucleic acid molecule encoding human stearoyl-CoA desaturase. Human
CC   stearoyl-CoA desaturase is mapped to chromosome 10. (I) has antilipaemic,
CC   cardiovascular, antiarteriosclerotic, cytostatic and antiinflammatory
CC   activities, and can be used in antisense therapy. The antisense compounds
CC   (I) can be used for modulating the expression of human stearoyl-CoA
CC   desaturase and for treating diseases or conditions associated with
CC   expression of human stearoyl-CoA desaturase, e.g. abnormal lipid or
CC   cholesterol metabolism, atherosclerosis, or cardiovascular diseases. The
CC   antisense compounds (I) can also be used for diagnostics, therapeutics
CC   and prophylaxis, e.g. to prevent or delay infection, inflammation or
CC   tumour formation, as research reagents and kits, and in distinguishing
CC   between functions of various members of a biological pathway. The present
CC   sequence represents a human stearoyl-CoA desaturase inhibiting chimeric
CC   phosphorothioate antisense oligonucleotide, which is given in an example
CC   from the present invention

PT   applications.
XX
PS   Claim 3; Page 94; 117pp; English.
XX
CC   The present invention describes a compound (I) that is 8-50 nucleobases
CC   in length targeted to a nucleic acid molecule encoding human stearoyl-CoA
CC   desaturase, and which specifically hybridises with and inhibits the
CC   expression of human stearoyl-CoA desaturase, or which specifically
CC   hybridises with at least an 8-nucleobase portion of an active site on a
CC   nucleic acid molecule encoding human stearoyl-CoA desaturase. Human
CC   stearoyl-CoA desaturase is mapped to chromosome 10. (I) has antilipaemic,
CC   cardiovascular, antiarteriosclerotic, cytostatic and antiinflammatory
CC   activities, and can be used in antisense therapy. The antisense compounds
CC   (I) can be used for modulating the expression of human stearoyl-CoA
CC   desaturase and for treating diseases or conditions associated with
CC   expression of human stearoyl-CoA desaturase, e.g. abnormal lipid or
CC   cholesterol metabolism, atherosclerosis, or cardiovascular diseases. The
CC   antisense compounds (I) can also be used for diagnostics, therapeutics
CC   and prophylaxis, e.g. to prevent or delay infection, inflammation or
CC   tumour formation, as research reagents and kits, and in distinguishing
CC   between functions of various members of a biological pathway. The present
CC   sequence represents a human stearoyl-CoA desaturase inhibiting chimeric
CC   phosphorothioate antisense oligonucleotide, which is given in an example
CC   from the present invention

PT   New antisense oligonucleotides targeted to nucleic acids encoding human
PT   stearoyl-CoA desaturase, useful for treating diseases associated with the
PT   desaturase, e.g. atherosclerosis, and in diagnostic and research
PT   applications.
XX
PS   Claim 3; Page 95; 117pp; English.
XX
CC   The present invention describes a compound (I) that is 8-50 nucleobases
CC   in length targeted to a nucleic acid molecule encoding human stearoyl-CoA
CC   desaturase, and which specifically hybridises with and inhibits the
CC   expression of human stearoyl-CoA desaturase, or which specifically
CC   hybridises with at least an 8-nucleobase portion of an active site on a
CC   nucleic acid molecule encoding human stearoyl-CoA desaturase. Human
CC   stearoyl-CoA desaturase is mapped to chromosome 10. (I) has antilipaemic,
CC   cardiovascular, antiarteriosclerotic, cytostatic and antiinflammatory
CC   activities, and can be used in antisense therapy. The antisense compounds
CC   (I) can be used for modulating the expression of human stearoyl-CoA
CC   desaturase and for treating diseases or conditions associated with
CC   expression of human stearoyl-CoA desaturase, e.g. abnormal lipid or
CC   cholesterol metabolism, atherosclerosis, or cardiovascular diseases. The
CC   antisense compounds (I) can also be used for diagnostics, therapeutics
CC   and prophylaxis, e.g. to prevent or delay infection, inflammation or
CC   tumour formation, as research reagents and kits, and in distinguishing
CC   between functions of various members of a biological pathway. The present
CC   sequence represents a human stearoyl-CoA desaturase inhibiting chimeric
CC   phosphorothioate antisense oligonucleotide, which is given in an example
CC   from the present invention

PT   New antisense oligonucleotides targeted to nucleic acids encoding human
PT   stearoyl-CoA desaturase, useful for treating diseases associated with the
PT   desaturase, e.g. atherosclerosis, and in diagnostic and research
PT   applications.
XX
PS   Claim 3; Page 95; 117pp; English.
XX
CC   The present invention describes a compound (I) that is 8-50 nucleobases
CC   in length targeted to a nucleic acid molecule encoding human stearoyl-CoA
CC   desaturase, and which specifically hybridises with and inhibits the
CC   expression of human stearoyl-CoA desaturase, or which specifically
CC   hybridises with at least an 8-nucleobase portion of an active site on a
CC   nucleic acid molecule encoding human stearoyl-CoA desaturase. Human
CC   stearoyl-CoA desaturase is mapped to chromosome 10. (I) has antilipaemic,
CC   cardiovascular, antiarteriosclerotic, cytostatic and antiinflammatory
CC   activities, and can be used in antisense therapy. The antisense compounds
CC   (I) can be used for modulating the expression of human stearoyl-CoA
CC   desaturase and for treating diseases or conditions associated with
CC   expression of human stearoyl-CoA desaturase, e.g. abnormal lipid or
CC   cholesterol metabolism, atherosclerosis, or cardiovascular diseases. The
CC   antisense compounds (I) can also be used for diagnostics, therapeutics
CC   and prophylaxis, e.g. to prevent or delay infection, inflammation or
CC   tumour formation, as research reagents and kits, and in distinguishing
CC   between functions of various members of a biological pathway. The present
CC   sequence represents a human stearoyl-CoA desaturase inhibiting chimeric
CC   phosphorothioate antisense oligonucleotide, which is given in an example
CC   from the present invention

CC   in length targeted to a nucleic acid molecule encoding human stearoyl-CoA
CC   desaturase, and which specifically hybridises with and inhibits the
CC   expression of human stearoyl-CoA desaturase, or which specifically
CC   hybridises with at least an 8-nucleobase portion of an active site on a
CC   nucleic acid molecule encoding human stearoyl-CoA desaturase. Human
CC   stearoyl-CoA desaturase is mapped to chromosome 10. (I) has antilipaemic,
CC   cardiovascular, antiarteriosclerotic, cytostatic and antiinflammatory
CC   activities, and can be used in antisense therapy. The antisense compounds
CC   (I) can be used for modulating the expression of human stearoyl-CoA
CC   desaturase and for treating diseases or conditions associated with
CC   expression of human stearoyl-CoA desaturase, e.g. abnormal lipid or
CC   cholesterol metabolism, atherosclerosis, or cardiovascular diseases. The
CC   antisense compounds (I) can also be used for diagnostics, therapeutics
CC   and prophylaxis, e.g. to prevent or delay infection, inflammation or
CC   tumour formation, as research reagents and kits, and in distinguishing
CC   between functions of various members of a biological pathway. The present
CC   sequence represents a human stearoyl-CoA desaturase inhibiting chimeric
CC   phosphorothioate antisense oligonucleotide, which is given in an example
CC   from the present invention

PT   stearoyl-CoA desaturase gene.
XX
PS   Example 3; SEQ ID NO 587; 139pp; English.
XX
CC   The present invention describes a short interfering nucleic acid (siNA)
CC   that downregulates expression of the SCD (stearoyl-CoA desaturase) gene
CC   by RNA interference. Also described: (1) modulating expression of SCD
CC   genes in cells, tissue explants or organisms by introduction of siNA; (2)
CC   kits for in vitro or in vivo delivery of siNA; (3) conjugates and/or
CC   complexes of siNA; and (4) vectors that express siNA. SCD inhibiting
CC   siNAs have anorectic, antidiabetic, antiarteriosclerotic, cytostatic and
CC   virucide activities. The siNAs can be used to modulate expression of SCD
CC   genes, in cells, tissue explants or organisms, e.g. for treating obesity;
CC   diabetes (types I and II); atherosclerosis; cancer and viral infections.
CC   They can also be used for drug screening; diagnosis; target
```

```
CC   identification and validation; genetic engineering; pharmacogenomics;
CC   studying gene function and gene mapping (e.g. of single-nucleotide
CC   polymorphisms). The present sequence represents an SCD siNA, which is
CC   used in the exemplification of the present invention.

XX
PS   Disclosure; SEQ ID NO 627; 139pp; English.
XX
CC   The present invention describes a short interfering nucleic acid (siNA)
CC   that downregulates expression of the SCD (stearoyl-CoA desaturase) gene
CC   by RNA interference. Also described: (1) modulating expression of SCD
CC   genes in cells, tissue explants or organisms by introduction of siNA; (2)
CC   kits for in vitro or in vivo delivery of siNA; (3) conjugates and/or
CC   complexes of siNA; and (4) vectors that express siNA. SCD inhibiting
CC   siNAs have anorectic, antidiabetic, antiarteriosclerotic, cytostatic and
CC   virucide activities. The siNAs can be used to modulate expression of SCD
CC   genes, in cells, tissue explants or organisms, e.g. for treating obesity;
CC   diabetes (types I and II); atherosclerosis; cancer and viral infections.
CC   They can also be used for drug screening; diagnosis; target
CC   identification and validation; genetic engineering; pharmacogenomics;
CC   studying gene function and gene mapping (e.g. of single-nucleotide
CC   polymorphisms). The present sequence represents an SCD siNA, which is
CC   used in the exemplification of the present invention.

PT   New double-stranded short interfering nucleic acid molecule, useful for
PT   down-regulating the expression of an endogenous mammalian target gene or
PT   for treating diseases that respond to modulation of gene expression or
PT   activity.
XX
PS   Example 24; SEQ ID NO 847; 593pp; English.
XX
CC   The invention relates to a double-stranded short interfering nucleic acid
CC   (siNA) molecule that down-regulates expression of an endogenous mammalian
CC   target gene comprising one or more chemical modifications and each strand
CC   of the double-stranded siNA comprises about 21 nucleotides. The siNA of
CC   the invention demonstrates antiarteriosclerotic, neuroprotective,
CC   nootropic, antiparkinsonian and anticonvulsant activities and may be
CC   useful for down-regulating the expression of an endogenous mammalian
CC   target gene and therefore in the treatment of any disease or condition
CC   that responds to modulation of gene expression or activity in a cell,
CC   tissue or organism. The disease or condition may include pulmonary
CC   diseases such as restenosis, atherosclerosis, Alzheimer's disease,
CC   Parkinson's disease, epilepsy, dementia, huntington's disease or
CC   amyotrophic lateral sclerosis. Furthermore, the siNA may be utilised for
CC   gene therapy applications. The current sequence is that of the siNA DNA-
CC   RNA hybrid of the invention.

PT   New double-stranded short interfering nucleic acid molecule, useful for
PT   down-regulating the expression of an endogenous mammalian target gene or
PT   for treating diseases that respond to modulation of gene expression or
PT   activity.
XX
PS   Example 24; SEQ ID NO 849; 593pp; English.
XX
CC   The invention relates to a double-stranded short interfering nucleic acid
CC   (siNA) molecule that down-regulates expression of an endogenous mammalian
CC   target gene comprising one or more chemical modifications and each strand
CC   of the double-stranded siNA comprises about 21 nucleotides. The siNA of
CC   the invention demonstrates antiarteriosclerotic, neuroprotective,
CC   nootropic, antiparkinsonian and anticonvulsant activities and may be
CC   useful for down-regulating the expression of an endogenous mammalian
CC   target gene and therefore in the treatment of any disease or condition
CC   that responds to modulation of gene expression or activity in a cell,
CC   tissue or organism. The disease or condition may include pulmonary
CC   diseases such as restenosis, atherosclerosis, Alzheimer's disease,
CC   Parkinson's disease, epilepsy, dementia, huntington's disease or
CC   amyotrophic lateral sclerosis. Furthermore, the siNA may be utilised for
```

CC gene therapy applications. The current sequence is that of the siNA DNA-
CC RNA hybrid of the invention.

PS Disclosure; SEQ ID NO 303; 138pp; English.
XX
CC The invention relates to short interfering nucleic acids (siNA) which
CC downregulate expression of the human interleukin-2 gene by RNA
CC interference. The siNAs may or may not comprise ribonucleotides and may
CC be double or single stranded. They further comprise sense and antisense
CC regions, or alternatively are assembled from a sense oligonucleotide and
CC an antisense oligonucleotide. Specifically, the siNAs include short
CC interfering RNA (siRNA, double-stranded RNA, micro-RNA (miRNA) and short
CC hairpin RNA (shRNA). The siNAs can be unmodified or chemically modified,
CC can contain deoxyribonucleotides, and can be chemically synthesised,
CC expressed from a vector or enzymatically synthesised. The invention also
CC relates to kits for the in vitro or in vivo delivery of siRNA; conjugates
CC and/or complexes of siRNA; and vectors that express siNA. The siNAs are
CC used to modulate expression of the interleukin-2 gene in cells, tissue
CC explants or organisms (e.g., by ex vivo gene therapy), or in grafts and
CC transplants for the treatment of a variety of conditions. They may be
CC used for treating cancer, restenosis and polycystic kidney disease. The
CC siNAs are also useful for drug screening, diagnosis, therapeutic target
CC identification and validation, genetic engineering, pharmacogenomics,
CC studying gene function, and gene mapping (e.g., of single nucleotide
CC polymorphisms). The present sequence represents a the antisense strand of
CC an exemplary chemically modified human interleukin-2-targeted double-
CC stranded siNA.

CC transplants for the treatment of a variety of conditions. They may be
CC used for treating cancer, restenosis and polycystic kidney disease. The
CC siNAs are also useful for drug screening, diagnosis, therapeutic target
CC identification and validation, genetic engineering, pharmacogenomics,
CC studying gene function, and gene mapping (e.g., of single nucleotide
CC polymorphisms). The present sequence represents a the antisense strand of
CC an exemplary chemically modified human interleukin-2-targeted double-
CC stranded siNA.

XX
CC The present invention describes a short interfering nucleic acid (siNA)
CC that downregulates expression of the SCD (stearoyl-CoA desaturase) gene
CC by RNA interference. Also described: (1) modulating expression of SCD
CC genes in cells, tissue explants or organisms by introduction of siNA; (2)
CC kits for in vitro or in vivo delivery of siNA; (3) conjugates and/or
CC complexes of siNA; and (4) vectors that express siNA. SCD inhibiting
CC siNAs have anorectic, antidiabetic, antiarteriosclerotic, cytostatic and
CC virucide activities. The siNAs can be used to modulate expression of SCD

CC genes, in cells, tissue explants or organisms, e.g. for treating obesity;
CC diabetes (types I and II); atherosclerosis; cancer and viral infections.
CC They can also be used for drug screening; diagnosis; target
CC identification and validation; genetic engineering; pharmacogenomics;
CC studying gene function and gene mapping (e.g. of single-nucleotide
CC polymorphisms). The present sequence represents an SCD siNA, which is
CC used in the exemplification of the present invention.

PT   New short interfering nucleic acid, useful e.g. for treatment and
PT   diagnosis of obesity or diabetes, downregulates expression of the
PT   stearoyl-CoA desaturase gene.
XX
PS   Example 3; SEQ ID NO 603; 139pp; English.
XX
CC   The present invention describes a short interfering nucleic acid (siNA)
CC   that downregulates expression of the SCD (stearoyl-CoA desaturase) gene
CC   by RNA interference. Also described: (1) modulating expression of SCD
CC   genes in cells, tissue explants or organisms by introduction of siNA; (2)
CC   kits for in vitro or in vivo delivery of siNA; (3) conjugates and/or
CC   complexes of siNA; and (4) vectors that express siNA. SCD inhibiting
CC   siNAs have anorectic, antidiabetic, antiarteriosclerotic, cytostatic and
CC   virucide activities. The siNAs can be used to modulate expression of SCD
CC   genes, in cells, tissue explants or organisms, e.g. for treating obesity;
CC   diabetes (types I and II); atherosclerosis; cancer and viral infections.
CC   They can also be used for drug screening; diagnosis; target
CC   identification and validation; genetic engineering; pharmacogenomics;
CC   studying gene function and gene mapping (e.g. of single-nucleotide
CC   polymorphisms). The present sequence represents an SCD siNA, which is
CC   used in the exemplification of the present invention.

PT   New double-stranded short interfering nucleic acid molecule, useful for
PT   down-regulating the expression of an endogenous mammalian target gene or
PT   for treating diseases that respond to modulation of gene expression or
PT   activity.
XX
PS   Example 24; SEQ ID NO 839; 593pp; English.
XX
CC   The invention relates to a double-stranded short interfering nucleic acid
CC   (siNA) molecule that down-regulates expression of an endogenous mammalian
CC   target gene comprising one or more chemical modifications and each strand
CC   of the double-stranded siNA comprises about 21 nucleotides. The siNA of
CC   the invention demonstrates antiarteriosclerotic, neuroprotective,
CC   nootropic, antiparkinsonian and anticonvulsant activities and may be
CC   useful for down-regulating the expression of an endogenous mammalian
CC   target gene and therefore in the treatment of any disease or condition
CC   that responds to modulation of gene expression or activity in a cell,
CC   tissue or organism. The disease or condition may include pulmonary
CC   diseases such as restenosis, atherosclerosis, Alzheimer's disease,
CC   Parkinson's disease, epilepsy, dementia, huntington's disease or
CC   amyotrophic lateral sclerosis. Furthermore, the siNA may be utilised for
CC   gene therapy applications. The current sequence is that of the siNA DNA-

PT   New immunostimulatory oligonucleotide comprising non-palindromic nucleic
PT   acid sequence motif, useful for inducing B-cell activation, treating,
PT   preventing or ameliorating immune system disorder or tumoral disease e.g.
PT   melanoma.
XX
PS   Disclosure; Fig 3; 139pp; English.
XX
CC   This invention relates to novel immunostimulatory oligonucleotides that
CC   contain a non-palindromic sequence motif. Specifically, it refers to DNA
CC   oligonucleotides (without a CpG motif), which can stimulate an immune
CC   response in animals of the order of primate, including humans. The immune
CC   response is characterised by the proliferation, differentiation, cytokine
CC   and antibody production in B-cells, as well as cell differentiation and
CC   cytokine production in plasmacytoid dendritic cells. The present
CC   invention describes immunomodulator compositions that also comprise an
CC   antigen selected from, for example, viruses, bacteria, parasites, tumour
CC   cells and glycolipids. As such, these DNA oligos can be used in gene
CC   therapy for inducing B-cell activation, treating, preventing or
CC   ameliorating an immune system disorder or a tumoural disease including
CC   chronic myelogenous leukaemia, melanoma, Kaposi's sarcoma, and renal cell
CC   carcinoma. This oligonucleotide sequence is an immunostimulatory non-CpG
CC   variant DNA oligo, used in an exemplification of the invention.

XX
CC   AAZ65654 to AAZ69578 represent human biallelic markers from the present
CC   invention, which contain a polymorphic base at position 24 of their
CC   nucleotide sequences. AAZ69579 to AAZ77440 represent amplification
CC   primers for the biallelic markers. The biallelic markers of the invention
CC   have a variety of uses: they can be used for high density mapping of the
CC   human genome, and in complex association studies and haplotyping studies
CC   which are useful in determining the genetic basis for disease states.
CC   Compositions and methods of the invention can also be useful for the
CC   identification of the targets for the development of pharmaceutical
CC   agents and diagnostic methods, as well as the characterisation of the
CC   differential efficacious responses to and side effects from
CC   pharmaceutical agents acting on a disease as well as other treatment.

PT   New short interfering nucleic acid, useful e.g. for treatment and
PT   diagnosis of obesity or diabetes, downregulates expression of the
PT   stearoyl-CoA desaturase gene.
XX
PS   Example 3; SEQ ID NO 602; 139pp; English.
XX
CC   The present invention describes a short interfering nucleic acid (siNA)
CC   that downregulates expression of the SCD (stearoyl-CoA desaturase) gene
CC   by RNA interference. Also described: (1) modulating expression of SCD
CC   genes in cells, tissue explants or organisms by introduction of siNA; (2)
CC   kits for in vitro or in vivo delivery of siNA; (3) conjugates and/or
CC   complexes of siNA; and (4) vectors that express siNA. SCD inhibiting
CC   siNAs have anorectic, antidiabetic, antiarteriosclerotic, cytostatic and
CC   virucide activities. The siNAs can be used to modulate expression of SCD
CC   genes, in cells, tissue explants or organisms, e.g. for treating obesity;
CC   diabetes (types I and II); atherosclerosis; cancer and viral infections.
CC   They can also be used for drug screening; diagnosis; target
CC   identification and validation; genetic engineering; pharmacogenomics;
CC   studying gene function and gene mapping (e.g. of single-nucleotide
CC   polymorphisms). The present sequence represents an SCD siNA, which is
CC   used in the exemplification of the present invention.

XX
CC The present invention describes a short interfering nucleic acid (siNA)
CC that downregulates expression of the SCD (stearoyl-CoA desaturase) gene
CC by RNA interference. Also described: (1) modulating expression of SCD
CC genes in cells, tissue explants or organisms by introduction of siNA; (2)
CC kits for in vitro or in vivo delivery of siNA; (3) conjugates and/or
CC complexes of siNA; and (4) vectors that express siNA. SCD inhibiting
CC siNAs have anorectic, antidiabetic, antiarteriosclerotic, cytostatic and
CC virucide activities. The siNAs can be used to modulate expression of SCD
CC genes, in cells, tissue explants or organisms, e.g. for treating obesity;
CC diabetes (types I and II); atherosclerosis; cancer and viral infections.
CC They can also be used for drug screening; diagnosis; target
CC identification and validation; genetic engineering; pharmacogenomics;
CC studying gene function and gene mapping (e.g. of single-nucleotide
CC polymorphisms). The present sequence represents an SCD siNA, which is
CC used in the exemplification of the present invention.

CC The present invention describes a short interfering nucleic acid (siNA)
CC that downregulates expression of the SCD (stearoyl-CoA desaturase) gene
CC by RNA interference. Also described: (1) modulating expression of SCD
CC genes in cells, tissue explants or organisms by introduction of siNA; (2)
CC kits for in vitro or in vivo delivery of siNA; (3) conjugates and/or
CC complexes of siNA; and (4) vectors that express siNA. SCD inhibiting
CC siNAs have anorectic, antidiabetic, antiarteriosclerotic, cytostatic and
CC virucide activities. The siNAs can be used to modulate expression of SCD
CC genes, in cells, tissue explants or organisms, e.g. for treating obesity;
CC diabetes (types I and II); atherosclerosis; cancer and viral infections.
CC They can also be used for drug screening; diagnosis; target
CC identification and validation; genetic engineering; pharmacogenomics;
CC studying gene function and gene mapping (e.g. of single-nucleotide
CC polymorphisms). The present sequence represents an SCD siNA, which is
CC used in the exemplification of the present invention.

XX
CC The present invention describes a short interfering nucleic acid (siNA)
CC that downregulates expression of the SCD (stearoyl-CoA desaturase) gene
CC by RNA interference. Also described: (1) modulating expression of SCD
CC genes in cells, tissue explants or organisms by introduction of siNA; (2)
CC kits for in vitro or in vivo delivery of siNA; (3) conjugates and/or
CC complexes of siNA; and (4) vectors that express siNA. SCD inhibiting
CC siNAs have anorectic, antidiabetic, antiarteriosclerotic, cytostatic and
CC virucide activities. The siNAs can be used to modulate expression of SCD
CC genes, in cells, tissue explants or organisms, e.g. for treating obesity;
CC diabetes (types I and II); atherosclerosis; cancer and viral infections.
CC They can also be used for drug screening; diagnosis; target
CC identification and validation; genetic engineering; pharmacogenomics;
CC studying gene function and gene mapping (e.g. of single-nucleotide
CC polymorphisms). The present sequence represents an SCD siNA, which is
CC used in the exemplification of the present invention.

PS Example 3; SEQ ID NO 368; 139pp; English.
XX
CC The present invention describes a short interfering nucleic acid (siNA)
CC that downregulates expression of the SCD (stearoyl-CoA desaturase) gene
CC by RNA interference. Also described: (1) modulating expression of SCD
CC genes in cells, tissue explants or organisms by introduction of siNA; (2)
CC kits for in vitro or in vivo delivery of siNA; (3) conjugates and/or
CC complexes of siNA; and (4) vectors that express siNA. SCD inhibiting
CC siNAs have anorectic, antidiabetic, antiarteriosclerotic, cytostatic and
CC virucide activities. The siNAs can be used to modulate expression of SCD
CC genes, in cells, tissue explants or organisms, e.g. for treating obesity;
CC diabetes (types I and II); atherosclerosis; cancer and viral infections.
CC They can also be used for drug screening; diagnosis; target
CC identification and validation; genetic engineering; pharmacogenomics;
CC studying gene function and gene mapping (e.g. of single-nucleotide
CC polymorphisms). The present sequence represents an SCD siNA, which is
CC used in the exemplification of the present invention.

XX
CC The present invention describes a short interfering nucleic acid (siNA)
CC that downregulates expression of the SCD (stearoyl-CoA desaturase) gene
CC by RNA interference. Also described: (1) modulating expression of SCD
CC genes in cells, tissue explants or organisms by introduction of siNA; (2)
CC kits for in vitro or in vivo delivery of siNA; (3) conjugates and/or
CC complexes of siNA; and (4) vectors that express siNA. SCD inhibiting
CC siNAs have anorectic, antidiabetic, antiarteriosclerotic, cytostatic and
CC virucide activities. The siNAs can be used to modulate expression of SCD
CC genes, in cells, tissue explants or organisms, e.g. for treating obesity;
CC diabetes (types I and II); atherosclerosis; cancer and viral infections.
CC They can also be used for drug screening; diagnosis; target
CC identification and validation; genetic engineering; pharmacogenomics;
CC studying gene function and gene mapping (e.g. of single-nucleotide
CC polymorphisms). The present sequence represents an SCD siNA, which is
CC used in the exemplification of the present invention.

PT   stearoyl-CoA desaturase gene.
XX
PS   Example 3; SEQ ID NO 68; 139pp; English.
XX
CC   The present invention describes a short interfering nucleic acid (siNA)
CC   that downregulates expression of the SCD (stearoyl-CoA desaturase) gene
CC   by RNA interference. Also described: (1) modulating expression of SCD
CC   genes in cells, tissue explants or organisms by introduction of siNA; (2)
CC   kits for in vitro or in vivo delivery of siNA; (3) conjugates and/or
CC   complexes of siNA; and (4) vectors that express siNA. SCD inhibiting
CC   siNAs have anorectic, antidiabetic, antiarteriosclerotic, cytostatic and
CC   virucide activities. The siNAs can be used to modulate expression of SCD
CC   genes, in cells, tissue explants or organisms, e.g. for treating obesity;
CC   diabetes (types I and II); atherosclerosis; cancer and viral infections.
CC   They can also be used for drug screening; diagnosis; target
CC   identification and validation; genetic engineering; pharmacogenomics;
CC   studying gene function and gene mapping (e.g. of single-nucleotide
CC   polymorphisms). The present sequence represents an SCD siNA, which is
CC   used in the exemplification of the present invention.

```
XX
CC   The present invention describes a short interfering nucleic acid (siNA)
CC   that downregulates expression of the SCD (stearoyl-CoA desaturase) gene
CC   by RNA interference. Also described: (1) modulating expression of SCD
CC   genes in cells, tissue explants or organisms by introduction of siNA; (2)
CC   kits for in vitro or in vivo delivery of siNA; (3) conjugates and/or
CC   complexes of siNA; and (4) vectors that express siNA. SCD inhibiting
CC   siNAs have anorectic, antidiabetic, antiarteriosclerotic, cytostatic and
CC   virucide activities. The siNAs can be used to modulate expression of SCD
CC   genes, in cells, tissue explants or organisms, e.g. for treating obesity;
CC   diabetes (types I and II); atherosclerosis; cancer and viral infections.
CC   They can also be used for drug screening; diagnosis; target
CC   identification and validation; genetic engineering; pharmacogenomics;
CC   studying gene function and gene mapping (e.g. of single-nucleotide
CC   polymorphisms). The present sequence represents an SCD siNA, which is
CC   used in the exemplification of the present invention.
